 A prosthetic valve in the form of a flap valve which includes at least one flap arranged to allow movement of liquid through the valve only in one direction, the or each flap being made of a flexible openwork structure of a medically acceptable metal.

 A prosthetic valve as claimed in claim 1 wherein said valve includes a single flap arranged to close against a supporting wall mounted upon a peripheral stent.

3. A prosthetic valve as claimed in claim 1 wherein said a valve includes two flaps

arranged to close against each other.

- 4. A prosthetic valve as claimed in claim 3 wherein said valve also includes a peripheral stent supporting a wall extending at right angles to the plane of the stent and providing two opposed cutouts in which said the flaps are mounted.
  - 5. A prosthetic valve as claimed in claim 1 wherein said valve includes three flaps of similar size, arranged to close against each other.

6. A prosthetic valve as claimed in claim 5 wherein said valve also includes a peripheral rib around the perimeter of the valve.

- 7. A prosthetic valve as claimed in claim 5 wherein said valve also includes a peripheral stent upon which the three flaps are mounted.
  - 8. A prosthetic valve as claimed in any one of the preceding claims, wherein the medically acceptable metal is titanium or a titanium alloy.
- 30 9. A prosthetic valve as claimed in any one of the preceding claims, wherein the flexible openwork structure is selected from the group consisting of: woven wire, knitted wire, chainmail, perforated plate.
